

IMPROVED PACKAGING FOR GOLF BALLS

Abstract of the Disclosure

5 A packaging for golf balls that acts as a moisture barrier inhibiting moisture
absorption by a golf ball during storage. In one embodiment, the packaging comprises
a housing defining an interior cavity sized to receive at least one golf ball. A lip on the
housing surrounds an aperture that communicates with the interior cavity and a flexible lid
is removably mounted on the lip. The lid is configured to be peelingly dismounted from
the lip and a golf ball is disposed within the interior cavity. The housing and the lid each
comprise a moisture barrier. In another embodiment, a packaging assembly comprises at
10 least one golf ball and a package separable from the golf ball defining a cavity within
which the golf ball is positioned. The package includes a sealing member at least a
portion of which comprises a moisture barrier. The cavity is sealed under pressure such
that gas audibly escapes from said cavity when the seal is broken.
